inter•lux decorative

Lighting is about creating an environment that uses light as the main medium of expression. It means having one's work blend seamlessly with the architecture, often at the risk of not being seen. It's about giving definition to a space.

Inter-lux has curated a collection of decorative lighting products that represent the best in design for use in commercial offices, restaurants and hotels.

This is Inter-lux decorative.

IP44.DE

IP44.DE is a young and progressive company that is conservative at the same time. We are conservative when it comes to quality standards and production details. Our technologies on the other hand are decidedly progressive.

It all began with a question that was both clear and obvious: why shouldn't luminaires for use outside be at least as aesthetically pleasing as those we have come to love for inside our buildings? This question led to the design of our very first outside luminaire, more than 30 years ago now. Many building owners, planners and architects liked our answer so that countless other luminaires have followed. A tentative experiment turned into a real company: IP44.DE, founded and ever since managed by Bernd Schmalhorst. What has stayed unchanged is our focus on top quality design, and our basic conviction that every place deserves great light.

● solar

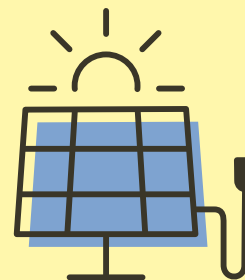

Two to three days with 10 hours of sunshine are sufficient to recharge the battery fully with climate-neutral energy via the solar panel.

A battery completely charged via the solar panel has enough power for numerous evenings of atmospheric lighting.

The luminaire switches on automatically when it starts to get dark – and switches off again of its own accord about five hours later. qua and fil can also be switched by hand.

reed solar, cherry bubbls solar, lix spike solar and piek mini solar are connected with a lead to the solar panel. Their solar field can therefore be positioned anywhere regardless of the luminaire and in ideal alignment to the sun.

It's logical: the longer and stronger the sunshine, the greater the burn time and optimum performance. By contrast, operating hours are reduced noticeably in the shade, with incorrect alignment or soiling, when it is cloudy or when the sun is low in the sky.

The battery can also easily bridge three days without sunshine before being recharged again.

Isn't it wonderful when a luminaire is not just aesthetic but also highly intelligent? aqu collects energy during the day and emits it in the form of amazingly bright light in the evening. Its integrated solar panel and efficient battery provide many hours of warm and welcoming brightness.

Available in true gold, jet black, and pearl white.

● aqu

So beautiful that you'll want to take it indoors too (and you can!): with its gently curved handle, aqu allows you to take it wherever you need to create a really bright spot.

cherry bubbls

If glow worms are allegedly seen in lots more gardens in the future, this could be due to cherry bubbls. The simple yet refined light chain can be hung anywhere from trees or fastened to balcony railings, wherever subtle light accents are pleasing to the eye. And the power-bank as the energy source makes it almost as flexible as a glow worm, shining all over the place.

Suspension Lights (includes 7 lights)

cherry bubbllights with powerbank includes 3-step dimming.

cherry bubbls canes

cherry bubbls canes turns simple tables into a festive setting or an atmospheric working environment.

cherry bubbls canes comes with a simple powder-coated steel profile holder that is easy to fasten to table tops or working surfaces. The powerbank and the driver disappear discreetly below the table top.

Suspension Lights
(includes 7 lights)

It's a well-known fact that a cube has six sides. In fil, the sides consist of a solar panel that is embedded flush in translucent fabric. A second inner cube of translucent polycarbonate creates a uniform light effect.

● fil

The integrated function button allows you to choose between manual and automatic mode. In automatic mode, the luminaire turns ON automatically at sunset to the light level you preset, and then automatically turns OFF after 5 hours. In manual mode, the function button is used for switching on and off, including the dim to amber function (2700K - 1800K).

Solar-Powered Outdoor Lamp
Auto/Manual Modes
Small and Medium Sizes

This is the fabric that fabulous light is made of: fil is covered with weather-proof, UV-resistant outdoor fabric that emanates brightness in a very pleasant way. Our Bauhaus-inspired luminaire is available in 19 and 28 inch heights.

Fil is so aesthetically appealing that you want to literally touch this outside luminaire. But its actual qualities are unfolded when its extraordinary warm light shines through the fabric shade. In fact, fil not only sheds light but lives from it at the same time: a solar panel on the top collects solar light and converts it into energy for many hours of light.

glim

Pure elegance in a reduced design language for cozy outdoor life: glim! The battery-powered table luminaire can be positioned everywhere. The magnetic luminaire pole - unmistakably inspired by traditional candlelight - also works when separated from the base: it can be placed quite simply on metallic surfaces.

Portable
Outdoor Lamp

● kal solar

Like a filigree finger, kal reaches up from flowerbeds, the wayside or across the ground – ideal for lighting up plants or paths. It comes in two sizes (12 and 24 inch heights), in a solar-powered version and with various connection options.

Automatic Operation

lix

sage, ruby, midnight, sun, aubergine

jet black, pearl white, frozen silver, true gold, bright bronze

lix

It's hard to say what we love most about lix: Its simple yet stunning form? Its long-lasting battery that treats us to many hours of brightness? Or is it its pleasant glare-free light, which can be easily controlled using the touch dimmer? One thing's for sure: lix is precisely the shining example of what's been missing in our outdoor setting.

Portable Outdoor
Table Lamp
Dim To Amber

The lampshade and reflector ensure that lix always sheds its light in a pleasantly glare-free downward direction. It even looks attractive when not in use. All it takes is a gentle tap with a finger to switch lix on. The radiance is adjusted with another gentle tap. The lix touch dimmer adjusts the luminous intensity in four levels.

lix mini

Candlelight feeling without any candles? lix mini fulfills this task with ease. Our smallest lix version creates the perfect atmosphere with dim-to-amber function, conveniently without any flickering, fire or soot. The luminaire body is available in the four alternative surface finishes; frozen silver, jet black, pearl white and bright bronze.

Portable Outdoor
Table Lamp
Dim To Amber

lix skinny

Filigree shape, lots of atmosphere: the slender sister of our bestseller, lix, lix skinny comes with a narrower contour and smaller head. Nevertheless, our portable table luminaire provides cozy light both indoors and outdoors. It also has a lean operating concept: one tap is enough to switch it on or off, another to adjust the desired light intensity.

lix skinny recharges itself with fresh energy on its practical charging base. Simply put it on and lix skinny recharges automatically.

Table Lamp
Dim To Amber**

● lix spike solar

The slender sister of our portable bestseller, lix. And in just the same way, lix spike solar provides glare-free wide-area all-round light, creating atmospheric light islands. This luminaire is supplied with power by its own solar and storage module, so that it is absolutely self-sufficient.

Solar-Powered
Outdoor Bollard
Automatic Operation

● piek mini solar

piek mini solar is a stand-alone solution in the best sense of the word. The flexible up- or downlight has its own solar and storage module so it can be used in places where light is needed but where there is no power socket in the vicinity. It is also self-sufficient in terms of functionality: the twilight function activates piek mini solar automatically for 5 hours as soon as it starts to get dark.

Accent Light
Automatic Operation**

qu

The modern lantern with great light can go wherever we want to be! In combination with the hook, qu shines a light on every wall, or hangs from the rope in trees, under veranda or balcony roofs.

With a 3-step touch dimmer, it creates atmospheric moments indoors and out. qu is available with a jet black or bright bronze frame, and a glass body in amber, jade or rose!

qu

Out of sight but definitely noticeable: qu's powerful battery is concealed in the base, while the bright LEDs are fitted in the top. This ensures that as a mobile downlight, qu illuminates its footprint, rather than the night sky. That is what you then see.

Without any shadow of a doubt, qu has been inspired by Chinese lanterns and traditional lanterns. While qu takes its shape from historic role models, we have fitted it with pioneering technical features including LEDs and a lithium-ion battery that supplies the energy to keep it going self-sufficiently for many hours.

With the hinged handle, qu can be hung on the qu hook and thus becomes an independent wall luminaire.

Portable
Outdoor Lamp

● qua

Small, but what a luminaire! qua is the power cube among the solar luminaires. Scores with its compact size and own power supply. The optional changeover from manual to automatic mode makes qua practically self-sufficient.

● reed solar

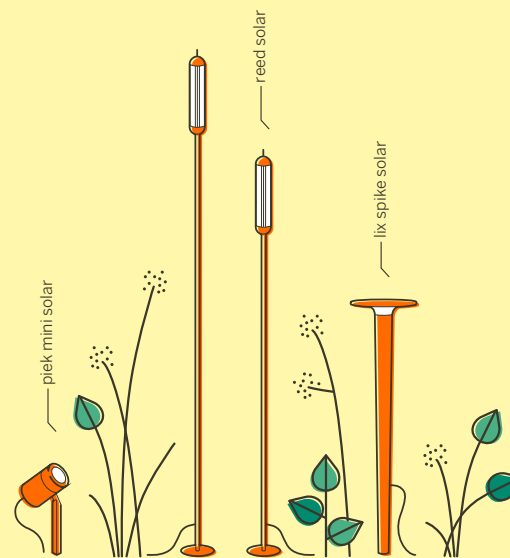

Unmistakably inspired by nature. Also at home even in places where there are no reeds or lakes nearby. reed solar with its refined smoke-colored glass body, simple aluminum pole and two different heights, creates the right setting for those parts of the garden that are blessed with sunshine but have no power connection.

Solar-Powered Bollard
Automatic Operation

● solar join

IP44.DE solar join can be used to create absolutely self-sufficient light islands, without any external power connection or conventional energy consumption. Combinations are possible with all IP44.DE solar join luminaire models for completely different light moods.

● solar join

solar panel L

The heart of every IP44.DE solar join system is the solar panel L. With its generous size of 8.9" x 8.9", it captures lots of sunlight, which is stored in a powerful battery. The articulated joint means it can be aligned to the current level of the sun.

port

Connects the solar panel and luminaires; available as port 2, port 3 and port 4 (each with 1 plug + 2/3/4 sockets).

extension cable

The extension cable makes it possible to extend the connection between port and solar panel or port and solar luminaire. Available in lengths of 6.6, 13 or 26 feet.
