

RUBBER

A glowing, curved light fixture, possibly made of rubber, is shown against a dark background. The light is bright and warm, creating a strong contrast with the surrounding darkness. The fixture is curved, and the light appears to be emanating from it, creating a sense of depth and three-dimensionality. The overall mood is minimalist and modern.

rubber

It is light that becomes alive and plays in three-dimensionality, as it bends, and turns upside down.

Rubber is a tangible sign towards a new conception of light.

MADE IN ITALY

Linea Light Group is a manufacturing organization which, along with its industrial capacity, has skilfully preserved a measure of that manual craftsmanship which has always characterized "Made in Italy" products. From conception to creation and all the way to assembly, our products are the combination of high technology, research and know-how, a recipe that has made Italian companies unique the world over. Alongside our traditional machines, we have placed new and high-performance units, allowing us to complete all the processes that have made our products unique in-house. We have gone beyond manufacturing: a perfect product must also be tested and certified. This is why Linea Light Group has its own in-house laboratory. Here, various quality, heat resistance and impact tests can be carried out, as well as ensuring that the uprights are able to withstand the weight of vehicle traffic and verifying the IP classes of our submersible products.

GUARANTEED QUALITY

The Rubber fixtures are certified and guaranteed for 5 years. The various types, color temperatures and power, thanks to a short and controlled supply chain totally Made in Italy, are available immediately. The company is ISO 9001 certified. The materials and components used for the creation of our products are guaranteed by international certifying bodies and are marked and tested in accordance with ICE/EN standards.

MATERIALS

All the material used to create Rubber are of very high quality. Rubber has a PVC structure and the diffuser is a polyurethane resin, which guarantees maximum flexibility and versatility thanks to the quality of the raw materials used. Raw materials that are predisposed to resist ageing and yellowing over time. The copper used for the PCB circuits, which is 99.9% pure, guarantees the perfect continuity of the electronic connections. The Rubber range is, by its very nature, self-dissipating. It does not need additional cooling bodies or systems and it has a reversed polarity system that acts as a guarantee and protection in the event of incorrect connection.

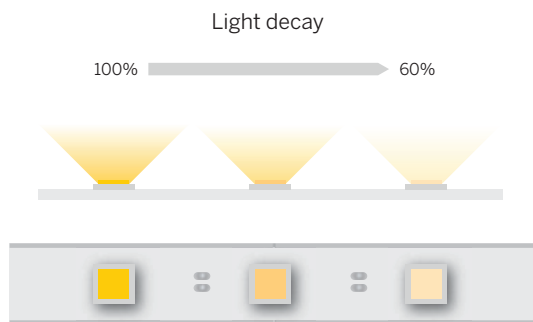

SELF-DISSIPATION

The circuit is specifically designed to allow rapid passage of the heat from one layer to another. This factor, combined with the use of high efficiency components, helps dissipate the heat generated and guarantees a high level of self-dissipation for the product, allowing the operating temperature to be controlled. Therefore, Rubber can be applied on multiple surfaces to create all kinds of lighting installations.

ICS REGULATORS

Thanks to special integrated circuits, Rubber guarantees uniform lighting along the entire length of the product. A specific chip intervenes upon a voltage drop, typical when there are extended circuits, preventing drops in the luminous flow. Thanks to these innovations, Rubber perfectly maintains lumen values from the start to the end of the circuit.

Competitor's products without ICS Regulator

Rubber with ICS Regulator

GLOW WIRE TEST

This is a fundamental safety test, the purpose of which is to simulate the effect of thermal stress that can be produced by electrical overheating in order to assess the risk of fire. The test anticipates the contact of an incandescent wire with the insulated parts of the product in order to assess how the material behaves under thermal stress in normal operating conditions. The minimum temperature required by current regulations is 1202°F. Our products have been tested and verified at 1760°F to provide the maximum guarantee in terms of safety, which demonstrates the quality of the material Linea Light Group selects for use.

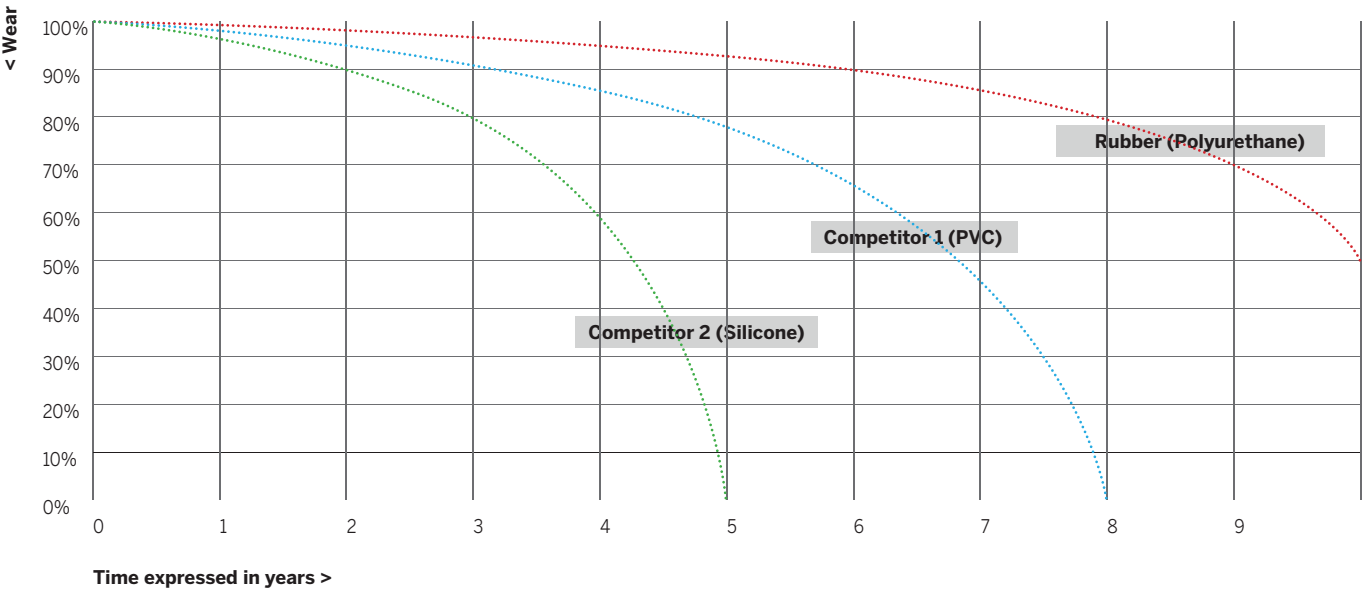

RESISTANCE TO SALT WATER AND SOLVENTS

A series of tests are conducted which are fundamental for examining and analysing the way the product behaves in extreme environments, such as the salt spray test, with isopropyl alcohol. The purpose of these tests is to understand the behaviour of the materials in high salinity level areas and in contact with aggressive solvents. The success of these tests makes it possible to be able to guarantee a product that can be installed in every outside environment.

RESISTANCE TO ULTRAVIOLET RAYS

Rubber is made up of different materials: the structure is made in PVC, whereas the diffuser is in polyurethane resin. Like all plastic materials, these are also subject to chromatic and physical variations over time. For this reason, Linea Light Group has selected specific materials that prevent these side effects. The purpose of the UV rays test is to predict ageing in the products.

CURVATURE RADIUS

Products in the Rubber range boast unique flexibility. The materials used permit formal, sinuous solutions to be created which had been unthinkable until now. Thanks to their intrinsic flexibility it is possible to achieve minimum radius of just 5.9" and 9.9". For a professional, this means being able to design freely, without any restrictions: every creation on paper can be faithfully produced.

Rubber 3D

3D

Rubber 3D is unique in its kind. Thanks to the patented structure of the internal circuit, the product can bend on all axes and make new installation methods and application concepts possible. There is no limit to imagination: organic and fluid curved structures with abrupt direction changes are no longer a problem, thanks to the unrestricted flexibility of Rubber 3D. The input/output cables permit the connection of multiple fixtures in series, maintaining uniform and constant light for the entire overall length of the installation, without interruptions in the junction points. Minimum curvature radius: 9.9".

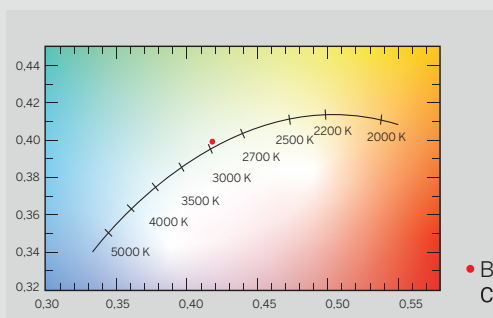

IP67

The entire Rubber range is IP67 certified, in other words high protection against solid bodies and dust, combined with total protection against rain, liquids, water splashes and temporary submersion in fresh water. IP67 protection means that Rubber can be installed in outdoor environments with high humidity, frequent inclement weather or in settings subject to sand and dust.

Concrete Finish

Rubber 3D with Concrete Finish astonishes, thanks to the way it integrates perfectly with the architecture. The product stands out for its cement gray finish, both in the profile and in the transmitting surface which, nevertheless, leads to absolutely no variation in the light tones. Along with high performance that is qualitatively unaltered, the finish lets Rubber blend in, camouflaging itself so that it is only noticed if it is on, thanks to the soft and clean emission. Rubber 3D Concrete Finish maintains a high grade of protection (IP67), is not adversely affected by exposure to ultraviolet rays, chlorine or saline environments and preserves its aesthetic (does not discolor) and technical properties (does not lose efficiency) over time.

• Binning Product Rubber 3D Concrete Finish.

Color temperature

With Linea Light Group, the designer has a choice of 5 color temperatures: 2200K, 2700K, 3000K, 3500K and 4000K for complete design versatility. A very important factor that influences the quality of an LED source is the step of the MacAdam ellipse which is attributed to them. Linea Light Group with its LED sources has always guaranteed a ≤ 3 step, which ensures the maintenance of the light tone within a defined range and with a color temperature that remains constant over time.

Perfect RGBW blend

Thanks to RGBW technology, where the colors are combined inside the polyurethane resin layer, the individual RGBW LEDs are always high performance. The white at 3000K and the three RGB colors (red, green and blue) are combined in a single diode. This solution guarantees the best color blend and results in an infinite variety of chromatic shades, as well as the possibility of obtaining shades of white without the influence of the RGB colors.

3D PIXEL

Rubber 3D PIXEL RGBW allows the creation of dynamic lighting effects, thanks to the i-LèD PIXEL technology allocated internally. The high definition of the pixel pitch, in other words, the space that defines the resolution of the final pixel (4.9") allows the creation of dynamic light scenarios visible from significant distances, typical in buildings where "Architainment light" is anticipated.

General: Rubber is a broad family of flexible lighting fixtures created to resolve even the most challenging architectural details and applications (columns, curved walls), both indoor and outdoor. Rubber is available in multiple solutions: from a 3D version with a diffused output that bends in every direction, to 2D Mini (only 0.2" wide) options that bend sideways, to get to the unique 3D Optic.

3D Optic has dedicated optics every inch which make this 360° bendable product a real lighting machine, unique in its category and with an unprecedented attention to its design and look.

Fixture Body: Polyurethane resin blended into a PVC flexible channel. Rubber 3D bends 360° (Min. Bending Radius 9.9").

Mounting/Casing: Multiple mounting solutions available: straight PVC or Aluminum channels and mounting clips with or without wireway; articulated channel to follow any shape the product is bent to.

Drive-over: Walk-Over only.

Dimensions/Weight: 39.5" (0.61 lbs) – 197" (3.01 lbs)

Driver: Remote, 24V DC Dimmable 0-10V or Non-Dim.

Wattages: 3 W/ft. Individual fixture wattage: 10W (39.5") – 50W (197")

Cable: Fixture comes with 0.82' of cable (Power cable required, ordered separately).

IP rating: IP67 for temporary flooding up to 3.28' depth for up to a maximum of 30 mins.

IK rating: IK 07

ETL Certification: ETL, wet location

Optics: Fixed, diffused.

Color temperatures: 2200K – 2700K – 3000K – 3500K – 4000K.

CRI: 90

Lumen Maintenance: L70 projections tested at Tj 65° C and Ta 25°. L70 (TM21 Projected 85C) 54,000 hours

Warranty: 5-year Limited Warranty on fixtures. 1-year Limited Warranty on Remote Drivers.

Rubber 3D Optic

Optics

Rubber 3D Optic has an optics system specifically designed by the Linea Light Group R&D office to adapt to the reduced dimensions of the circuit and the stress due to the flexibility and the curvature radius. The TIR (Total Internal Reflection) optics reduce the secondary beams, increasing emission precision for an outstanding wall grazing effect. Once precision-positioned on the LED, the optics are stabilized by the cast polyurethane resin, becoming one with the adjustable body of Rubber 3D Optic. This procedure makes it possible to always maintain maximum technical lighting performance.

Minimum curvature radius: 9.9".

TIR Optic

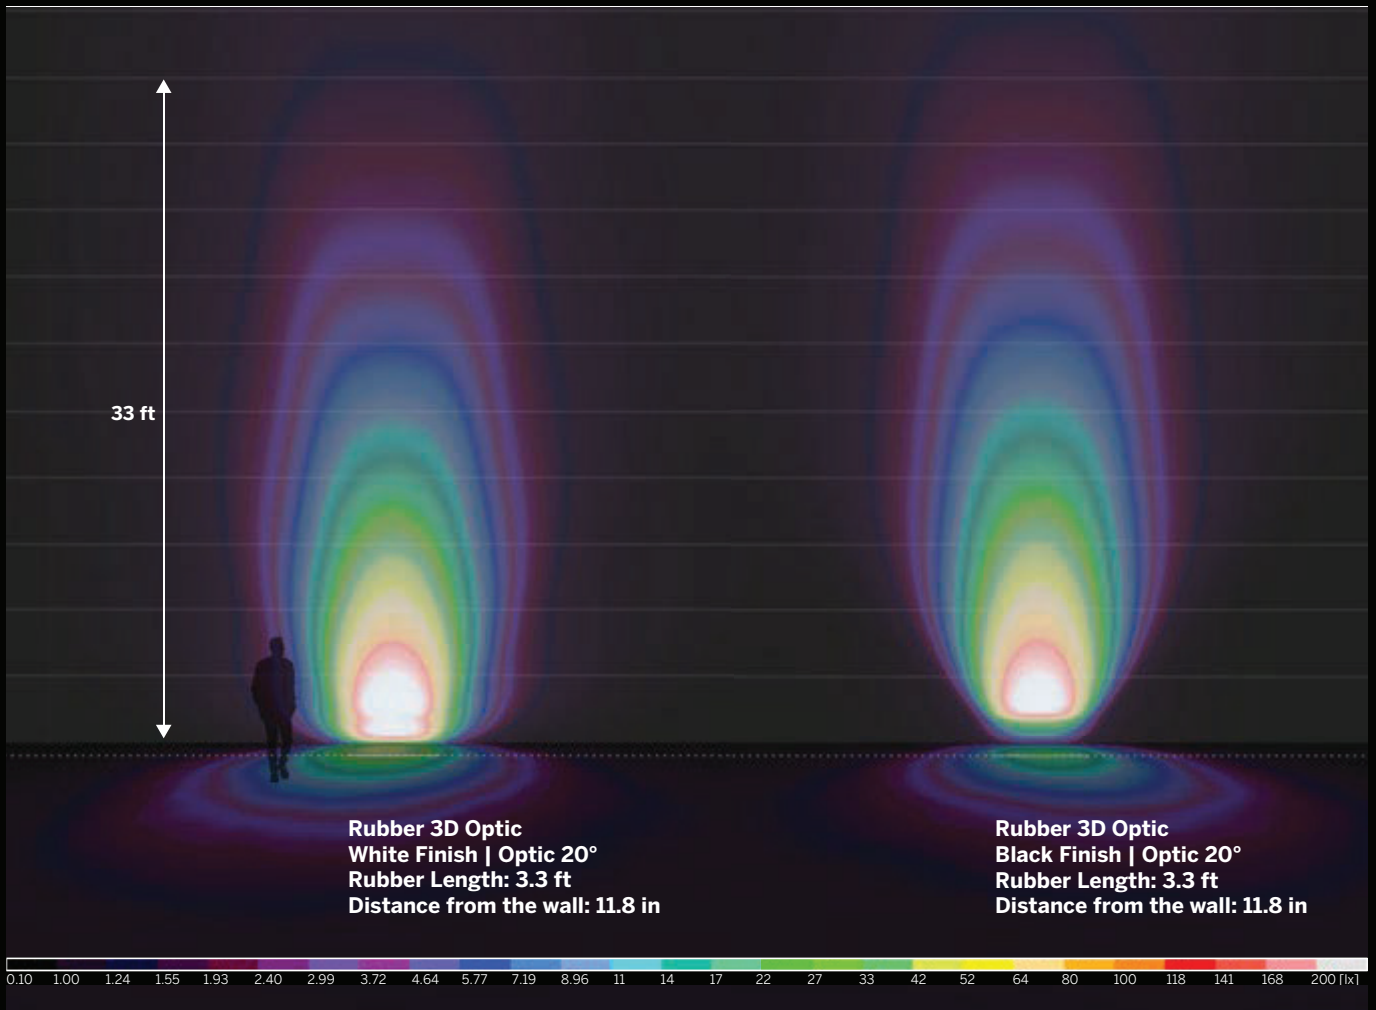

Black & White Finish

Available in white or black finish, color choice is not only a question of aesthetics, but it implies differences on a light emission level as well. Rubber 3D Optic with Black Finish has excellent glare control and extremely high performance emission, similar to that of a linear system, designed to obtain wall grazing effects even on significantly tall façades. Rubber 3D Optic with White Finish maintains the high performance of Rubber 3D Optic with the characteristic of also being illuminated outside the optics group, thereby generating an architectural lighting effect along the entire profile.

Rubber 3D Pixel

General: Rubber is a broad family of flexible lighting fixtures created to resolve even the most challenging architectural details and applications (columns, curved walls), both indoor and outdoor. Thanks to its innovative technology, the new Rubber 3D PIXEL RGBW allows the creation of dynamic lighting effects. Depending on the selected pixel "pitch" (the space that defines the resolution of the final pixel), the dynamic light show created by the product can be visible from significant distances.

Fixture Body: Polyurethane resin blended into a PVC flexible channel. Rubber 3D PIXEL RGBW bends 360° (Min. Bending Radius 9.9").

Pixel Resolution: 4.9" (125mm)

Mounting/Casing: Multiple mounting solutions available: straight PVC or Aluminum channels and mounting clips with or without wireway; articulated channel to follow any shape the product is bent to.

Drive-over: Walk-Over only.

Dimensions/Weight: 19.7" (0.33 lbs) - 39.4" (0.61 lbs) – 196.9" (3.01 lbs)

Driver: Remote, 24V DC DMX dimmable.

Control Protocol: SPI dimmable, UCS8904

Wattages: 4 W/ft. Individual fixture wattage: 6.6W (19.7") - 13.2W (39.4") – 66W (196.9")

Cable: Fixture comes with 0.82' of cable (Power cable required, ordered separately).

IP rating: IP67 for temporary flooding up to 3.28' depth for up to a maximum of 30 mins.

IK rating: IK 07

ETL Certification: ETL, wet location

Optics: Fixed, diffused.

Color temperatures: RGBW (White 3000K).

CRI: 80+

Lumen Maintenance: L70 projections tested at Tj 65° C and Ta 25°.

Warranty: 5-year Limited Warranty on fixtures. 1-year Limited Warranty on Remote Drivers.

Rubber 2D Mini

Rubber 2D Mini

Like the standard 0.5 model, the Mini version is also an ideal solution for curves and reverse curves that demand bending on a single axis, combining flexible installation with high performance. IP67 certified, it differs from any other Rubber with its extremely reduced dimensions. Rubber 2D Mini packs in just 0.2" a custom designed circuit that allows extremely high performance to be achieved with very thin light for discrete and elegant linear effects. Just like the internal electronics, the accessories, clips and profiles are also specifically designed for the minimum bulk of the strip.

Minimum curvature radius: 5.9".

Rubber 2D Mini

General: Rubber is a broad family of flexible lighting fixtures created to resolve even the most challenging architectural details and applications (columns, curved walls), both indoor and outdoor. Rubber is available in multiple solutions: from a 3D version with a diffused output that bends in every direction, to 2D Mini (only 0.2" wide) options that bend sideways, to get to the unique 3D Optic.

3D Optic has dedicated optics every inch which make this 360° bendable product a real lighting machine, unique in its category and with an unprecedented attention to its design and look.

Fixture Body: Polyurethane resin blended into a PVC flexible channel. Rubber 2D Mini is Side Bend only (Min. Bending Radius 5.9").

Mounting/Casing: Straight Aluminum channels and mounting clips.

Drive-over: Walk-Over only.

Dimensions/Weight: 39.3" (0.61 lbs) – 196.9" (3.01 lbs) – 393.8" (8.49 lbs)

Driver: Remote, 24V DC Dimmable 0-10V or Non-Dim.

Wattages: 1.8 W/ft. Individual fixture wattage: 6W (39.3") – 30W (196.9") – 60W (393.8")

Cable: Fixture comes with 0.82' of cable (Power cable required, ordered separately).

IP rating: IP67 for temporary flooding up to 3.28' depth for up to a maximum of 30 mins.

IK rating: IK 05

ETL Certification: ETL, wet location

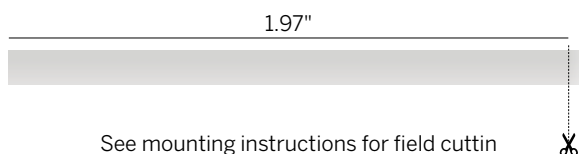

Optics: Fixed, diffused.

Color temperatures: 2200K – 2700K – 3000K – 3500K – 4000K.

CRI: 80+

Lumen Maintenance: L70 projections tested at Tj 65° C and Ta 25°.

Warranty: 5-year Limited Warranty on fixtures. 1-year Limited Warranty on Remote Drivers.

rubber

It is light that becomes alive and plays in three-dimensionality, as it bends, and turns upside down.

Rubber is a tangible sign towards a new conception of light.
